

Easy to trim on beam-reach courses

If you are a cruising yachtsman who is looking for a Code Zero or Reacher that is tough and can be trimmed easily, **Stormlite** is the most suitable cloth for you. The combination of polyester yarn with melamine impregnation make Stormlite into a cloth that retains its shape better than spinnaker fabric made of nylon.

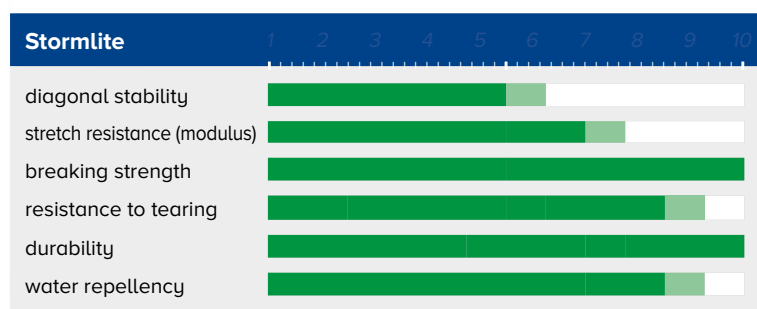

**Stormlite** retains its shape even under extreme conditions due to the high tensile strength of the polyester yarns. The fabric also has improved durability because of its good UV resistance compared to nylon.

To produce the world's finest spinnaker cloths, **Contender works closely with** their fibre producers, weavers and the outstanding **German finishing company KBC**. Thanks to this close co-operation and constant consultation with sailors and sailmakers all over the world, we have built up an unrivalled knowledge and understanding of spinnaker cloth.
