

NEW STAYPUT™ Dome Hook Saddle

Registered Design

The **New Stayput™ Dome Hook Saddle** introduces a new model to the Stayput™ Dome Hook range. The Stayput™ Dome Hook Saddle was designed to be used with a hook such as the Saint® Marine Canopy Strap Hook (pictured) and 25mm webbing strap, but will also work with other hooks on the market. The Stayput™ Dome Hook Saddle offers the same great features and simple installation as the existing Dome Hooks but allows for a more robust, non elastic anchoring method to be used. It can be fixed to most solid structures using 2 x 8g screws which are then neatly covered by a cap. The end result is a secure anchor point which will not corrode, is very easy to install and minimizes the risk of being a trip / snag hazard. The Stayput™ Dome Hook is suited to many applications and will be just as at home on the deck of your boat as it is on your deck at home.

Key features of the NEW Stayput™ Dome Hook Saddle:

- Made in Australia
- Simple to install
- Low profile minimizes the risk of being a tripping hazard
- Manufactured using a UV stabilized nylon compound
- 100% corrosion free
- Available in Black, White, Cement, Terracotta & Clay
- Strong - Our ongoing testing has shown no sign of breaking while under a constant load of over 20kg.
