

STAYPUT™ PRESS CLIP

Registered Design

The Stayput™ Press Clip comprising of a Cap, Stud & Base is the **corrosion free** alternative to conventional metal press studs and is designed to be used for attaching fabric to a solid surface. The Press Clip has been designed primarily for marine use where corrosion is an ever present problem, however corrosion is not a problem for the UV stabilised 100% nylon Press Clip.

- All 3 components are manufactured entirely using UV stabilized nylon compounds and are available in black and white as standard. The cap is also available in Navy & Royal Blue, Light Grey, Beige and Burgundy to match popular marine fabrics.
- The Cap & Stud are installed by simply pressing the parts together through a 5mm hole in the fabric. The 5mm Stayput Spin Cut Tool is ideal for making a neat hole.
- The base is fixed using either a 6g countersunk screw or a 3mm (1/8") pop rivet.
- A hand tool or inserts for a press n snap tool are available for installing the Cap & Stud. They can also be installed by simply inserting the Stud into a Base and then tapping the Cap into the Stud using a hammer.
- The Stayput Press Clip will not cause electrolysis or seize in marine environments thus eliminating possible damage to your boat or covers through corrosion.
- The Stayput Press Clip, when used in conjunction with the superior holding power & security of the Stayput Horizontal, Vertical or Canvas to Canvas fasteners, now offers a totally corrosion free and secure fastening solution.
